Team expectations

All five members are developers. Each member will understand the application, communicate decisions, contribute code, test their work, and explain their contribution. Starting responsibilities are suggestions and may be adjusted by mutual agreement.

Meetings and communication

Meeting day and time _____ Time zone _____. Members will check Teams regularly and give advance notice of absence or delay. Decisions and task updates will be recorded in Teams and the Agile board.

Work quality and help

Members will break work into clear tasks with agreed deadlines, use branches and review changes, avoid committing credentials, and test their work before requesting review. Anyone who needs help will tell the group before the next meeting or as soon as a deadline is at risk. A teammate will help them learn and complete the task.

Corrective actions

For a missed commitment, the member and team will agree a recovery plan and revised deadline. If the issue repeats, the team will record the affected tasks and attempts to resolve it, then ask the professor for guidance. Only the professor decides any formal flagging, grade consequence, or conditions for removing a flag under course policy. Members can resolve the issue by completing the agreed recovery work and providing evidence.

Outside help and amendments

If the group cannot resolve a technical problem, it will ask the professor or seek appropriate learning resources. The team will follow course rules on collaboration and AI assistance. Any amendment must describe the changed terms and effective date and receive all members' written agreement.

Agreement

By signing, we confirm that we discussed and agreed to the final terms and read the course syllabus. Each member signs for themselves. The remaining signature lines are blank until those members sign.
